Molecular Evolution
A Statistical Approach

Ziheng Yang, University College London

- Clear explanations of complex statistical models and principles, using examples of real data analysis and numerical calculations to illustrate the theory
- Web-based support material includes example data sets, C and R programs that implement computational algorithms discussed in the book, and a primer on probably and statistics
- Ideal graduate seminar course material with working problems at the end of each chapter

This book presents and explains the statistical methods and computational algorithms developed in molecular evolution, phylogenetics and phylogeography for the comparative analysis of genetic sequence data.
